R. Anadol: Glacier Dreams (2023)

REFIK ANADOL: GLACIER DREAMS (2023)

- „living data paintings” und „machine hallucinations”
- Mustererkennung, machine learning und Bildproduktion
- Grundlage: Datenbank von Gletscherbildern
- Algorithmus „erträumt” virtuelle Natur

R. Anadol: Glacier Dreams (2023)

REFIK ANADOL: GLACIER DREAMS (2023)

„I realized that because these forms are going away, my ability to capture them digitally with data and AI meant I could preserve nature.” (R. Anadol)

- Sensibilisierung für Klimawandel?
- machine learning und Erderwärmung
- virtuelle vs. tatsächliche Verflüssigung der Gletscher

R. Anadol: Glacier Dreams (2023)

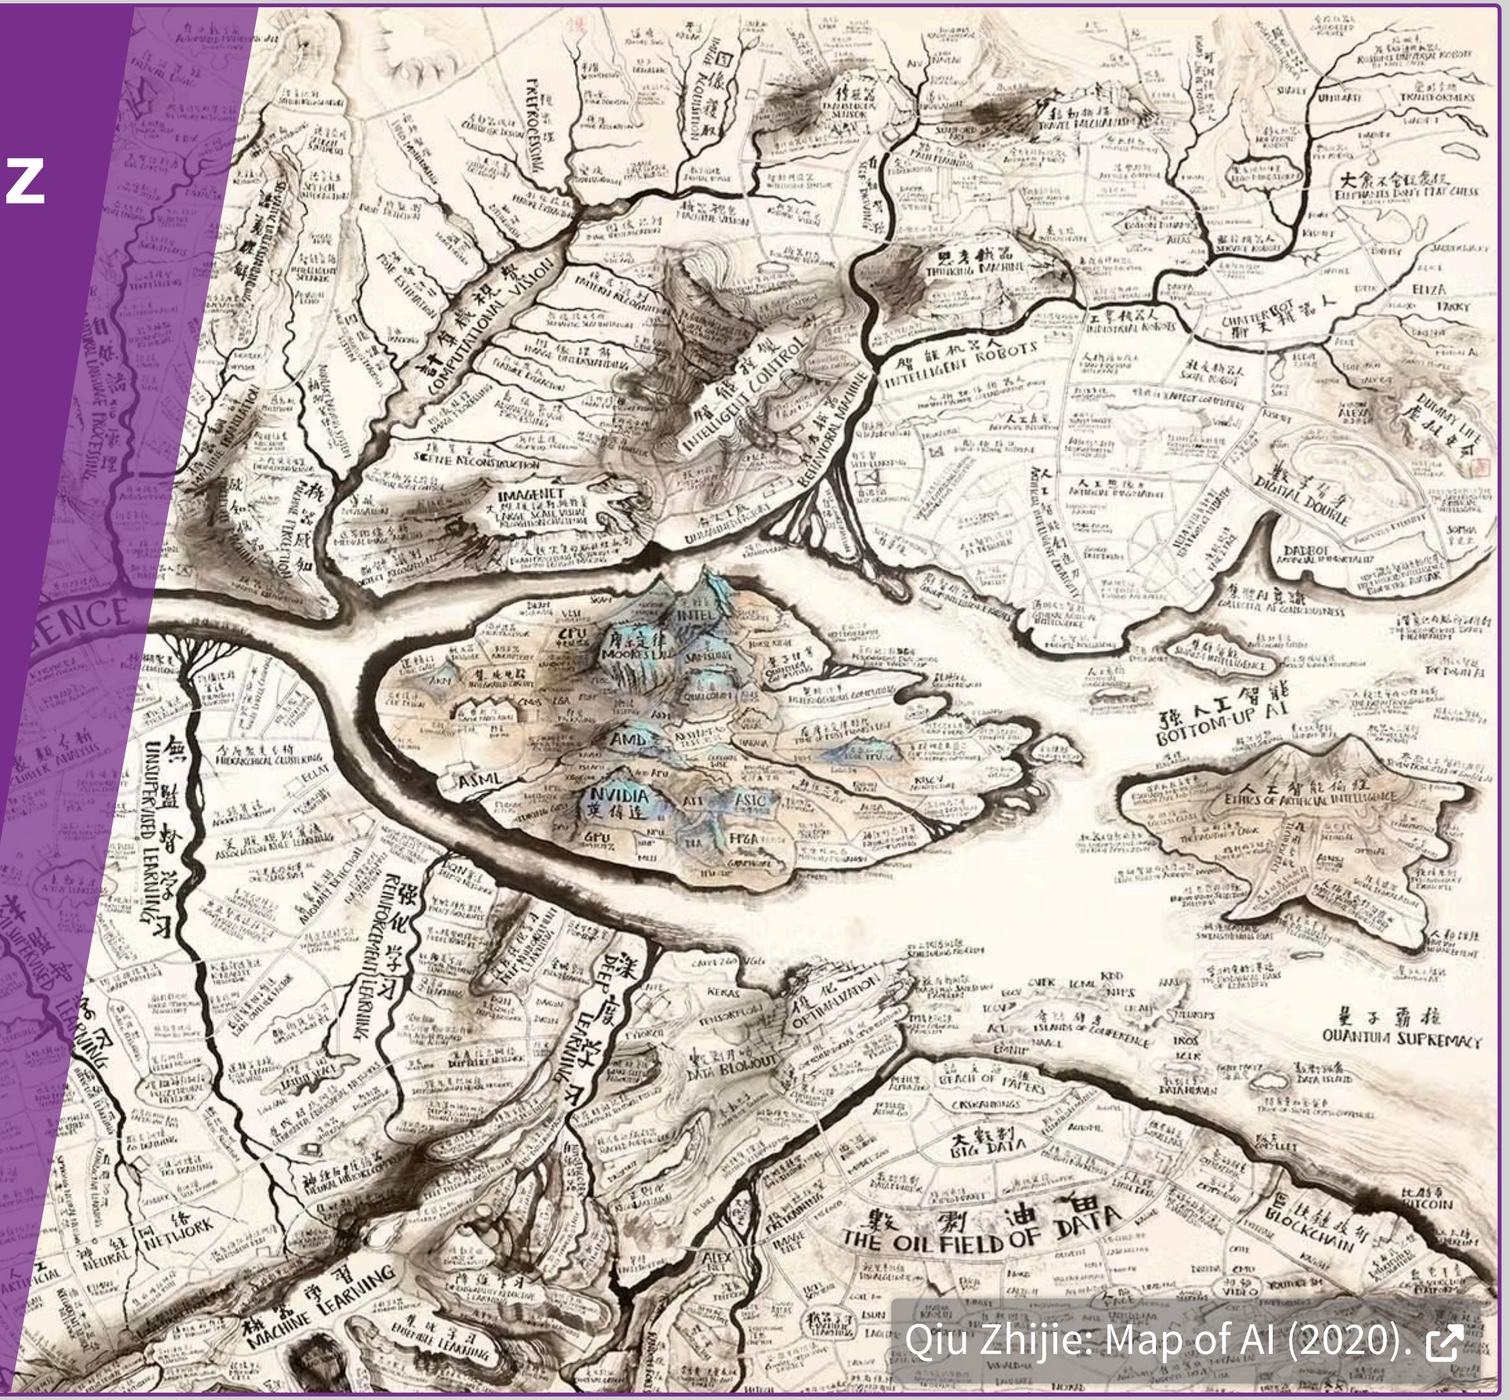
EINE KARTOGRAFIE KÜNSTLICHER INTELLIGENZ

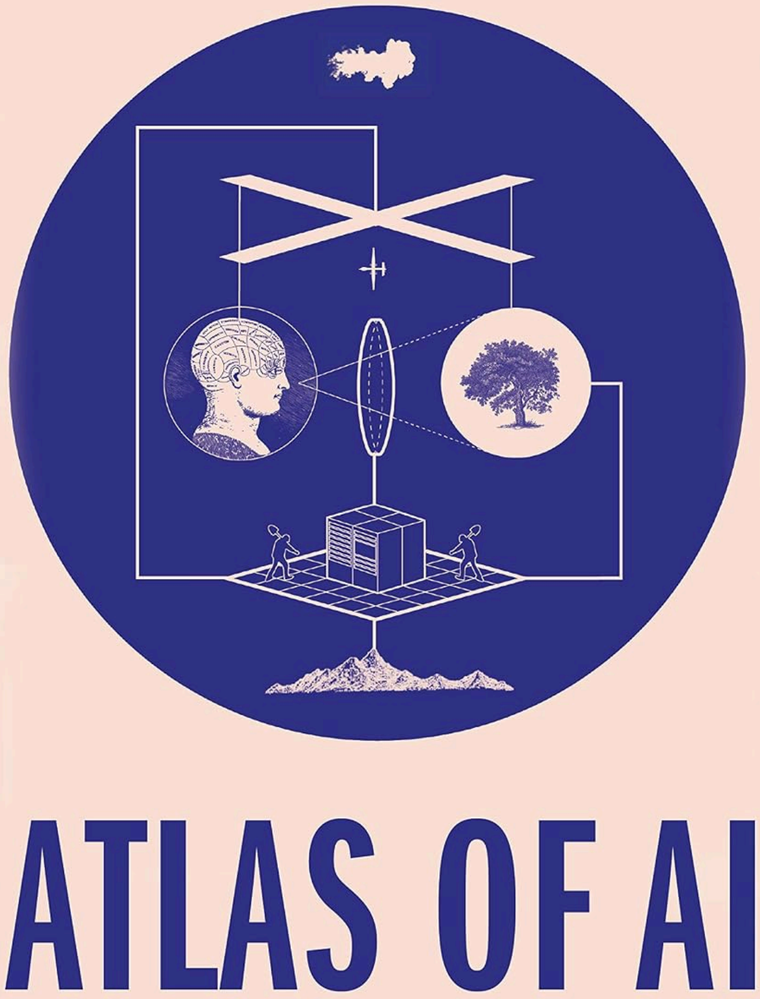
- topografische Karte
- mythologische Landschaft
- Mindmap
- Einschreibung von KI in materielle Welt



Qiu Zhijie: Map of AI (2020).

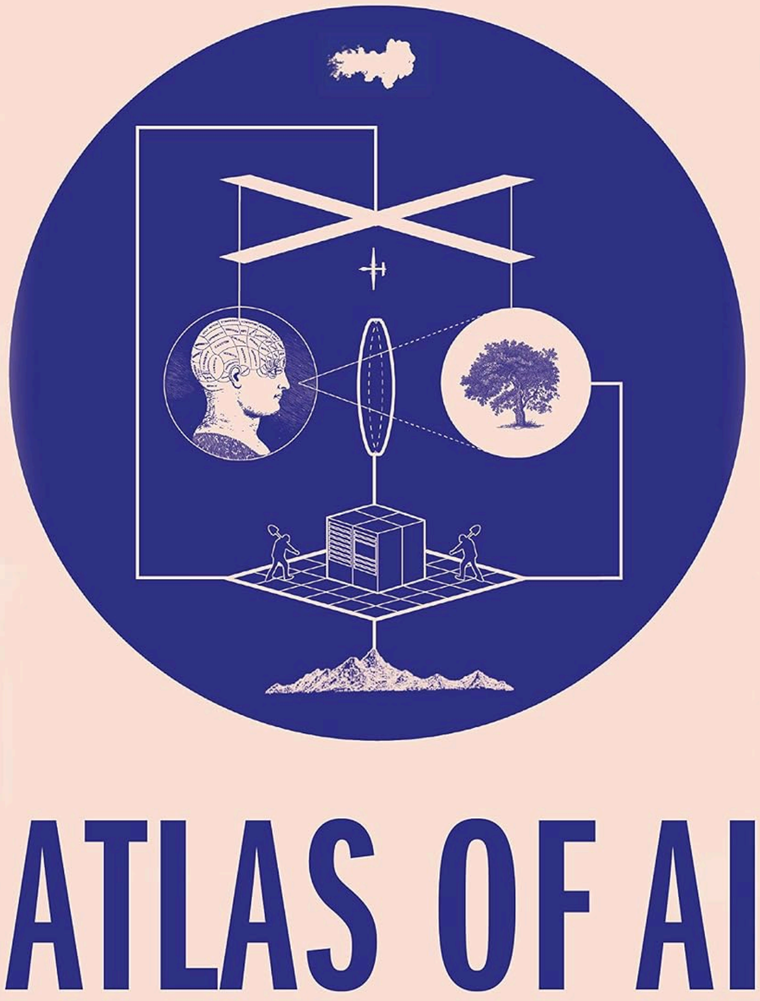
CRAWFORD: ATLAS OF AI

“The French philosopher Georges Didi-Huberman thinks of the atlas as something that inhabits the aesthetic paradigm of the visual and the epistemic paradigm of knowledge. By implicating both, it undermines the idea that science and art are ever completely separate. Instead, an atlas offers us the possibility of rereading the world, linking disparate pieces differently and „reediting and piecing it together again without thinking we are summarizing or exhausting it.” (10)



CRAWFORD: ATLAS OF AI

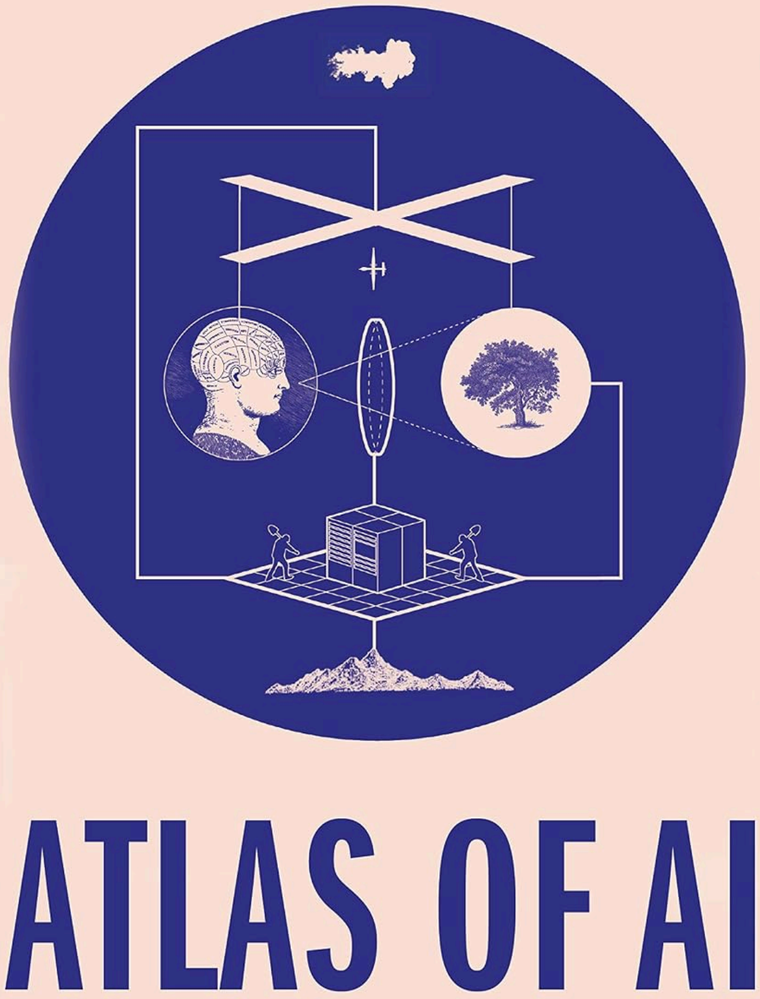
> By invoking an atlas, I'm suggesting that we need new ways to understand **the empires of artificial intelligence**. We need a theory of AI that accounts for the states and corporations that drive and dominate it, the extractive mining that leaves an imprint on the planet, the mass capture of data, and the profoundly unequal and increasingly exploitative labor practices that sustain it.



CRAWFORD: ATLAS OF AI

> By invoking an atlas, I'm suggesting that we need new ways to understand **the empires of artificial intelligence**. We need a theory of AI that accounts for the states and corporations that drive and dominate it, the extractive mining that leaves an imprint on the planet, the mass capture of data, and the profoundly unequal and increasingly exploitative labor practices that sustain it.

> A topographical approach offers different perspectives and scales, beyond the abstract promises of artificial intelligence or the latest machine learning models. The aim is to understand AI in a wider context by walking through the many different landscapes of computation and seeing how they connect.



KI ALS INFRASTRUKTUR

> Each small moment of convenience – be it answering a question, turning on a light, or playing a song – **requires a vast planetary network**, fueled by the extraction of non-renewable materials, labor, and data. […] **A full accounting for these costs is almost impossible,** but it is increasingly important that we grasp the scale and scope if we are to understand and govern the technical infrastructures that thread through our lives.

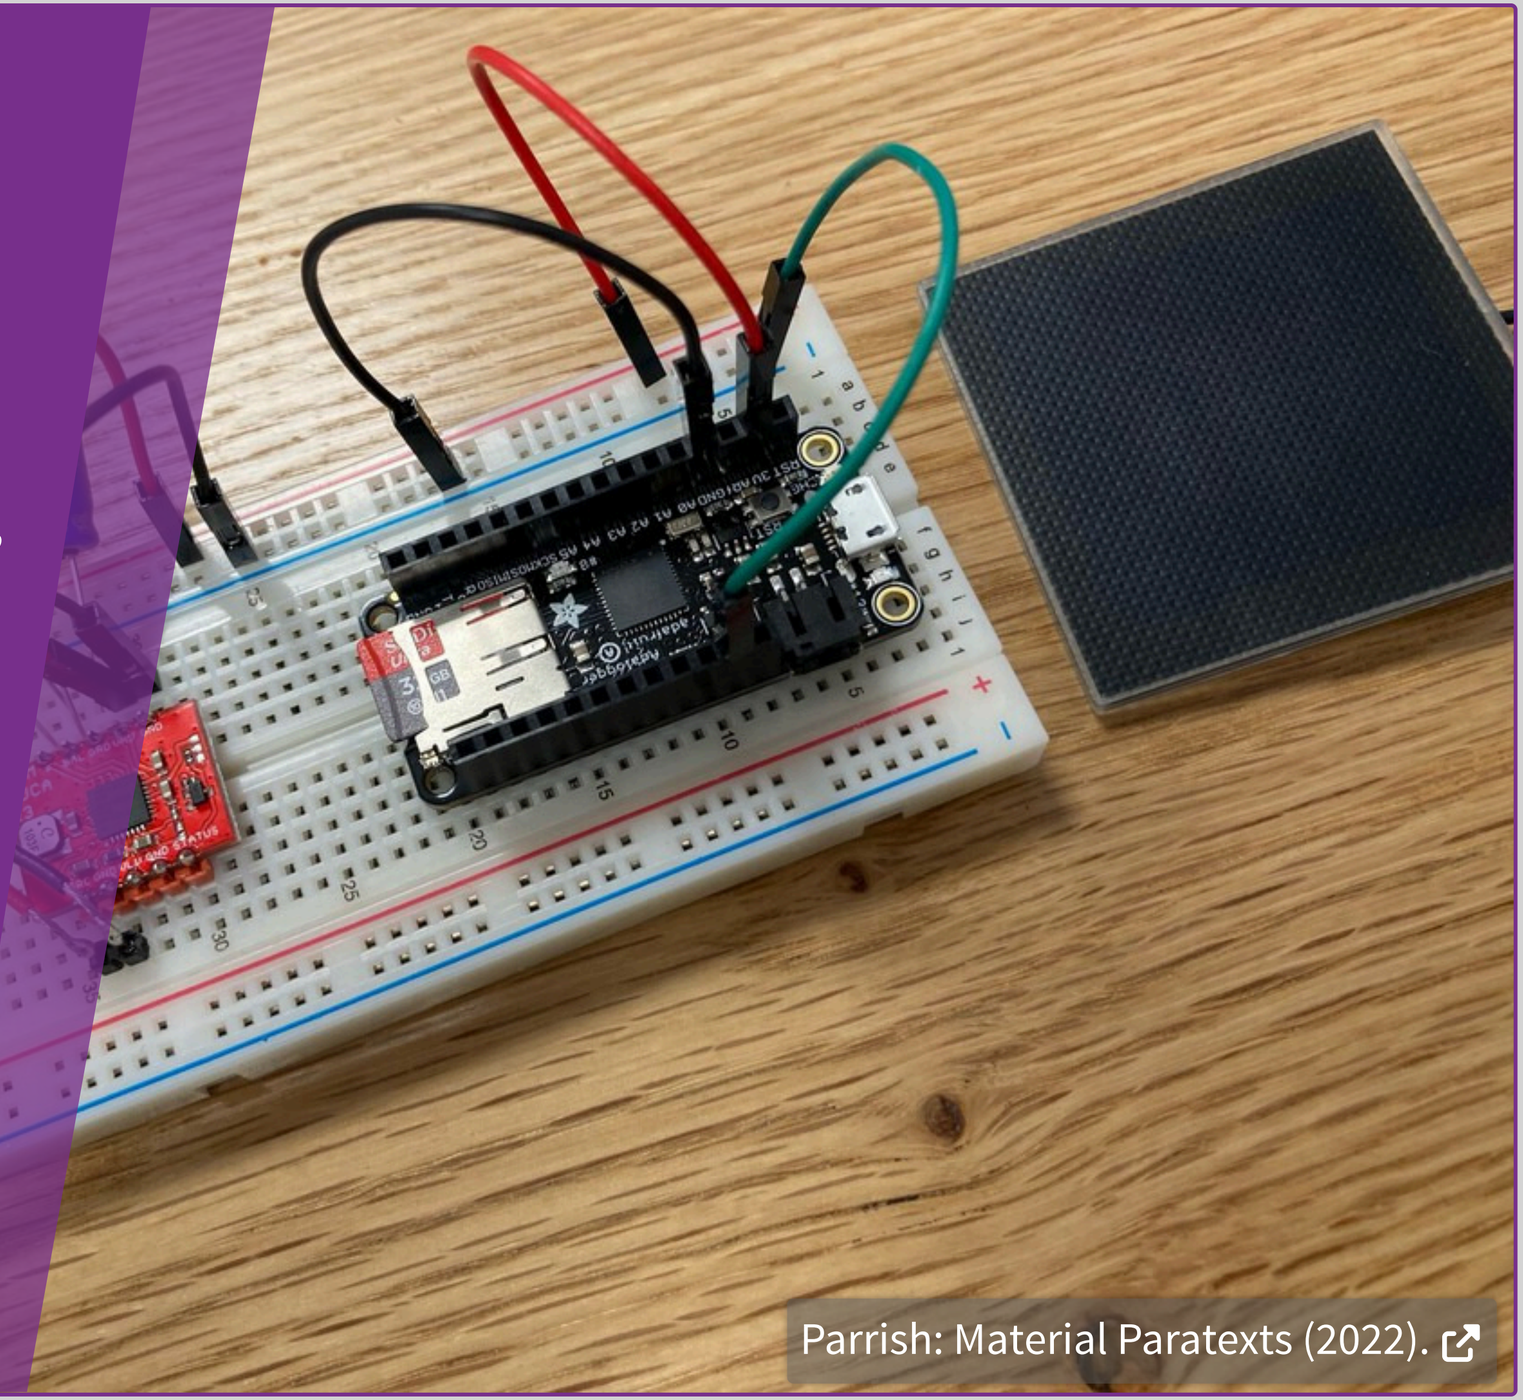
ALLISON PARRISH
SOLAR POWERED DAWN POEMS

For rage to be numbered,
And whilst love mounts her on earth.
Still wander, weeping, wishing for the fair,
Lest the cock crow reveillie,
Thou too, Phoebus,
Wake up! wake up!
as if shedding on me a light that sorowe
So thou wilt have it so.



Parrish: Material Paratexts (2022).
